# Predicting Coronary Stenosis by Computer-Enhanced, Resting Electrocardiogram

## *Effect of Gender, Age, and Revascularization on Sensitivity and Specificity*

# Disclosures

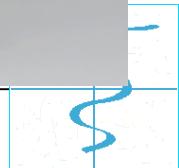

- Dr. J.T. Shen is founder and managing member of Premier Heart LLC and co-inventor of the web-based 3DMP method.
- The other authors have no disclosures to make.

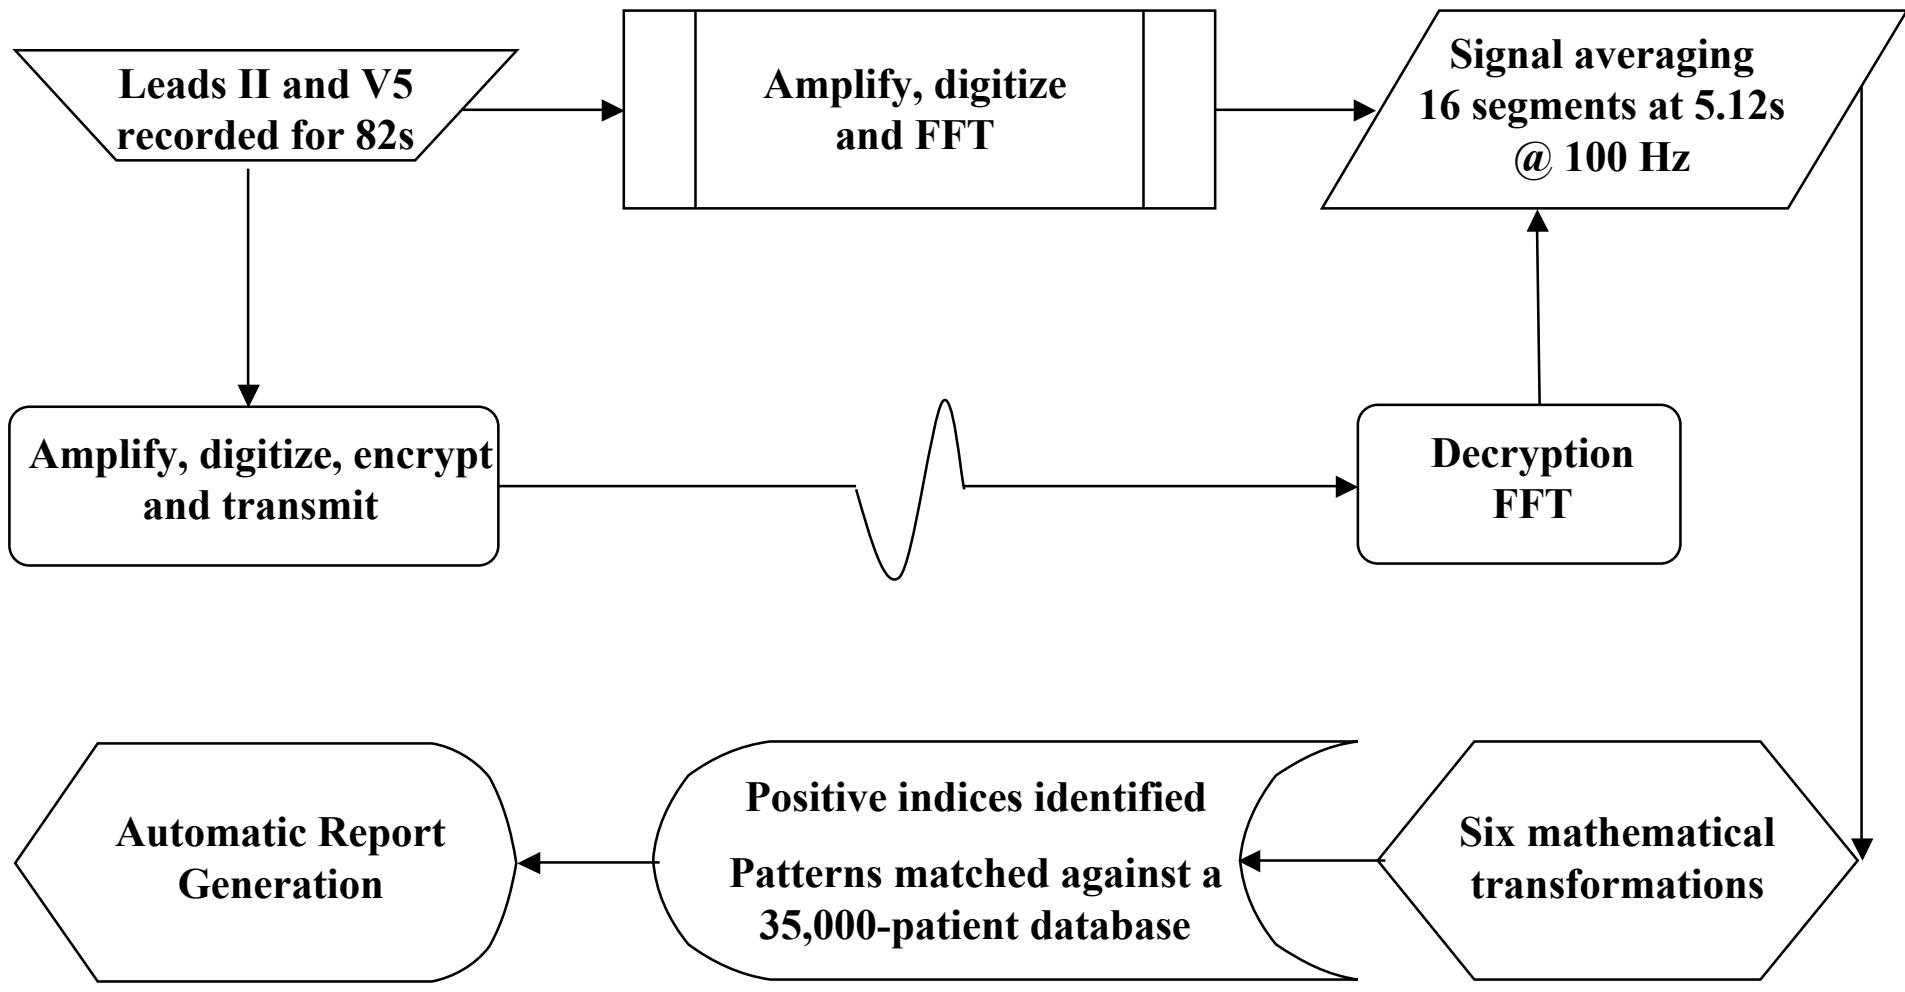

# 3DMP

## *Digital Database Driven Multi Phase*

- A computerized expert ECG System
  - Sophisticated mathematical analysis
  - Validated digital patient database
- An innovative, non-invasive diagnostic device for myocardial ischemia due to coronary artery disease

# Signal and Digital Data Processing

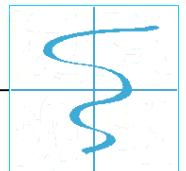

# 3DMP Database

- 35,000 cases
  - Confirmed medical diagnosis
  - Benchmark references for pattern recognition
- Proprietary software for data interpretation
  - Automated comparison to database
  - Diagnosis of myocardial ischemia
- Automatic scoring system
  - Quantitative assessment of severity of myocardial ischemia

# Clinical Study

- Previous study (*Weiss et al, 2002*) showed good sensitivity and specificity of 3DMP in the prediction of hemodynamically relevant coronary stenosis
- Large single-center convenience sample of an unselected patient population scheduled for coronary angiography
- Comparison to angiography
- Focus on effect of gender, age, and previous revascularization on performance of the method

# Patients

- 758 patients scheduled for angiography
  - 277 female , 65.3 +/- 10.6 yoa
  - 481 male, 60.5 +/-10.7 yoa
  - 433 under 65 yoa,
  - 325 65 yoa and over
- 545 patients without previous coronary intervention
  - 61.6 +/- 11.2 yoa, 38% female
- 213 patients after coronary revascularization at least 6 weeks before study
  - 63.8 +/- 9.8 yoa, 32% female
  - 147 PCI, 63.2 +/-10.3 yoa
    - 55 female (37%), 68.6 +/- 7.8 yoa
    - 92 male (63%), 60.0 +/- 10.2 yoa
  - 66 CABG, 65.3 +/- 8.6 yoa
    - 13 female (20%), 66.3 +/- 10.0 yoa
    - 53 male (80%), 65.0 +/- 8.3 yoa

# Coronary Angiography

- Standard procedures
- Immediate classification of results by angiographer
- Independent classification by second cardiologist
- Dichotomous classification of hemodynamically relevant coronary stenosis
  - Stenosis “NO”: < 70% stenosis (< 50% LCA)
  - Stenosis “YES”: > 70% stenosis (> 50% LCA)
- Both investigators blinded against 3DMP results

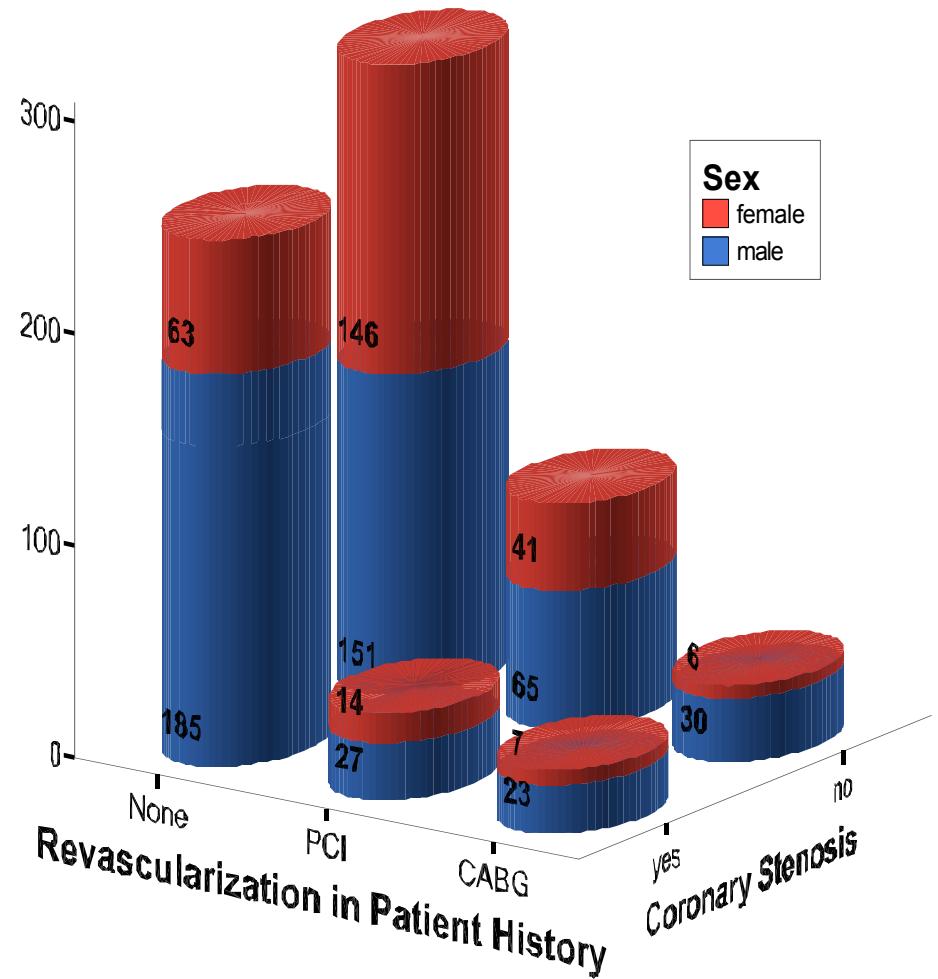

# 3DMP ECG

- Prior to angiography after 20 min rest
- Limb leads and V5
- 82 second simultaneous recording of leads II and V5
- Amplification, digitization, transmission to central server (after ECG quality check)
- Calculation of severity score (0 to 20)
  - Higher values associated with higher likelihood of coronary stenosis
  - Cut-off > 4 indicative of hemodynamically relevant stenosis
- ECG technician and Premier Heart staff blinded against angiograms

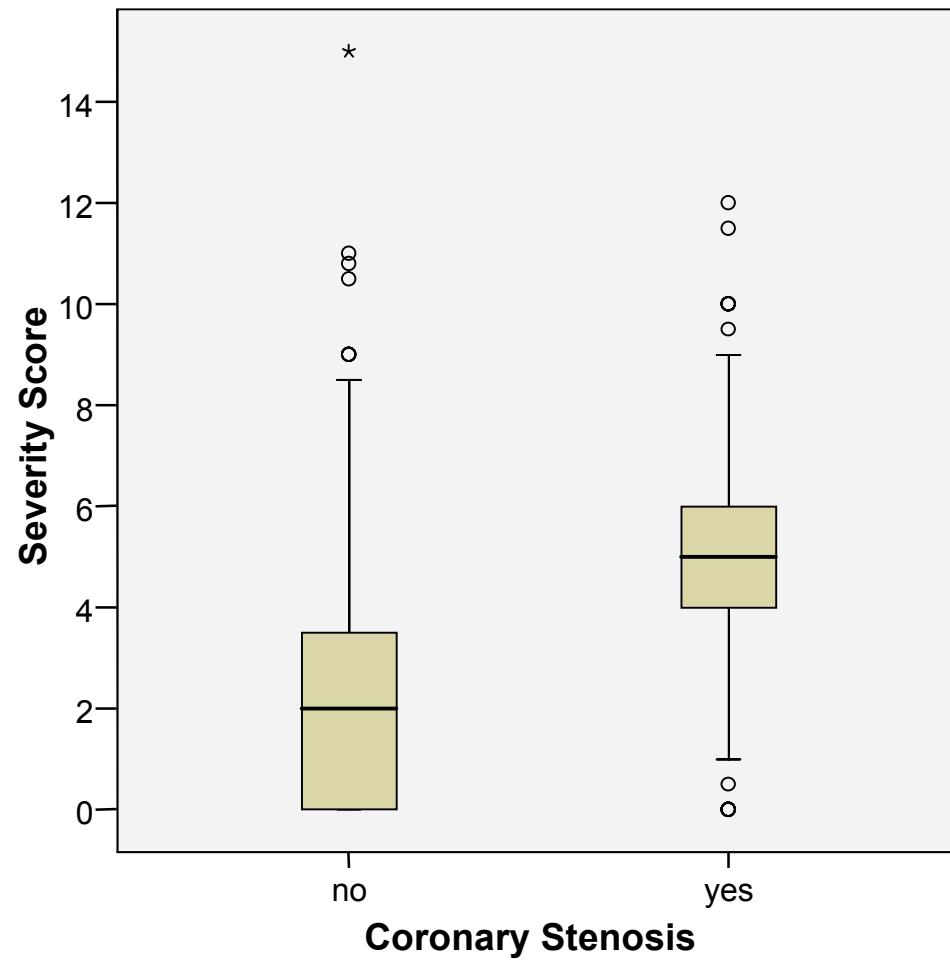

# Coronary Stenosis

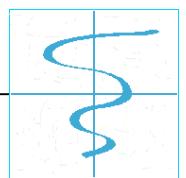

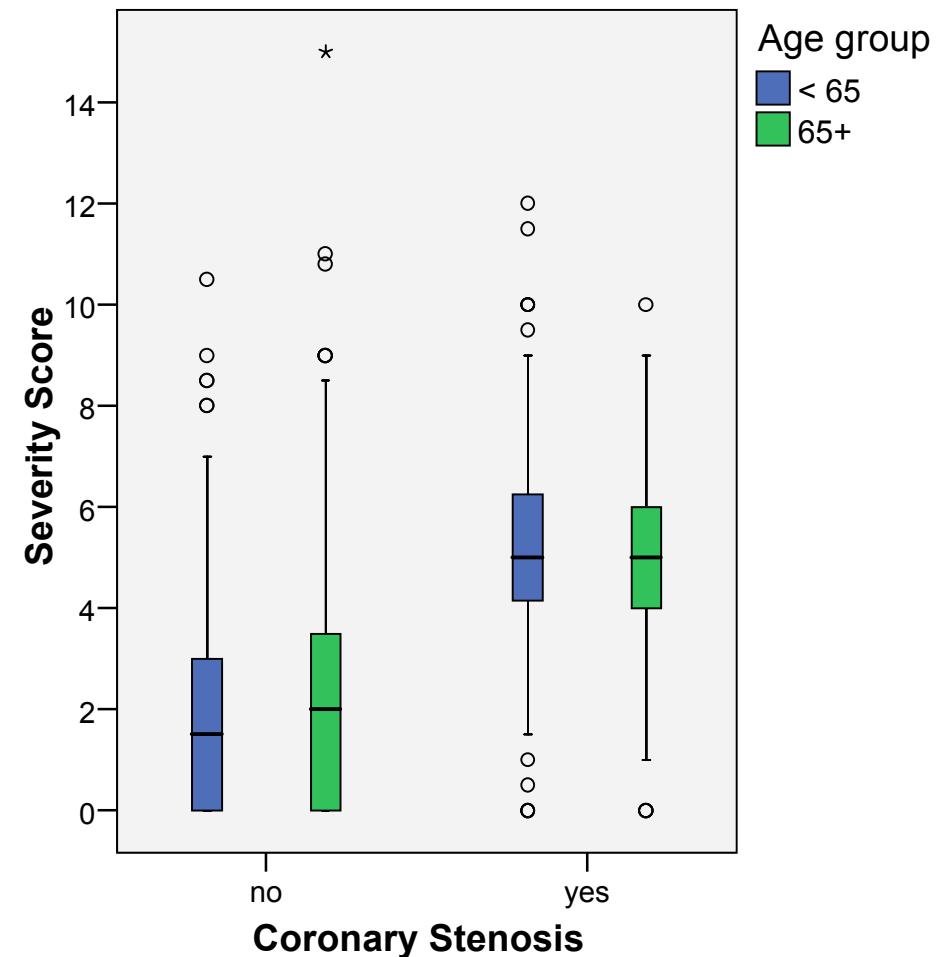

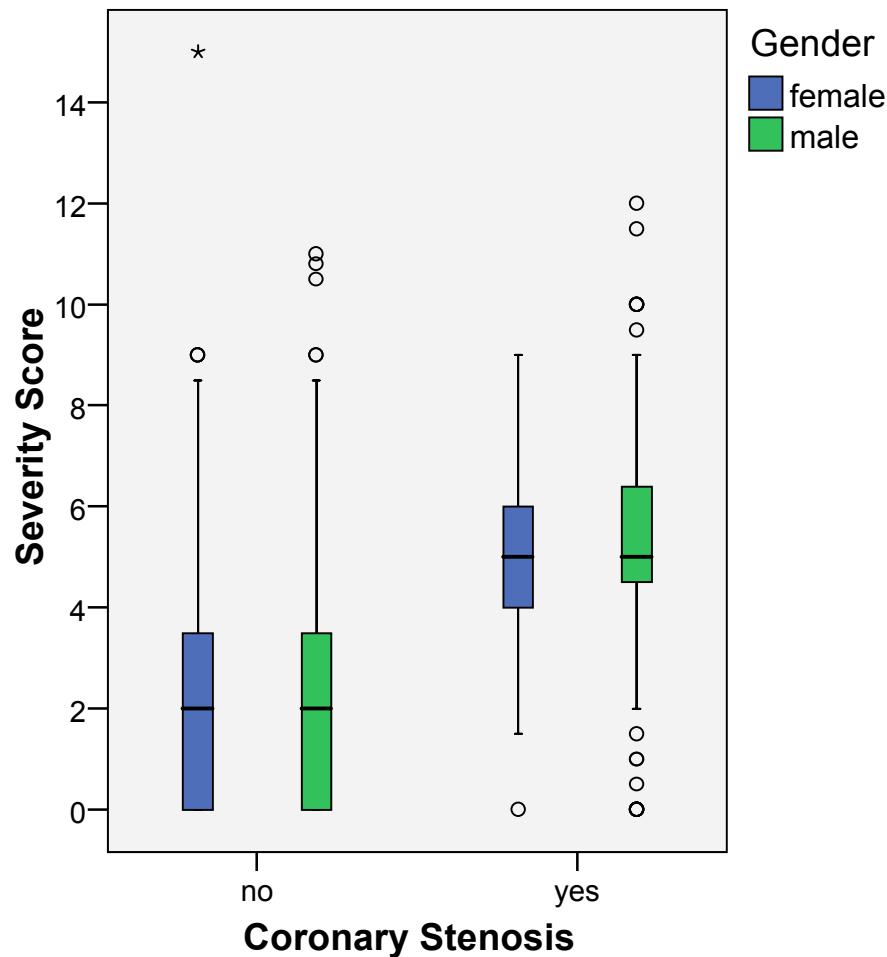

- 319 of 758 patients (42%)
  - 46% primary
  - 28% post PCI
  - 46% post CABG
- Overall, stenosis more frequent in men and older patients
- No gender or age differences after revascularization

# Summary

- Computerized resting ECG analysis
- Prediction of coronary stenosis
  - 87% correct predictions, sensitivity 89%, specificity 86%
  - adjusted PPV 77%
  - adjusted NPV 94%
- No significant effects on performance from Gender, Age, Type of Revascularization
- Further studies warranted (and planned)

# Conclusions

- Non-invasive screening for coronary artery stenosis
- Feasible in patients with contraindications to stress testing
- Similar rule-out performance like stress testing (awaits further study)
- Simple applications by technicians
- Presence of a physician not required
